

Appln. No. 10/758,324

Attorney Docket No. 10541-1828

II. Amendments to the Claims

1. (Currently amended) A method of controlling a hydraulic coupling system, comprising

 pressurizing a fluid in an actuator coupled to a multi-disk clutch pack to engage the clutch pack;

 pumping the fluid through the clutch pack to cool the clutch pack; and

 transmitting pulse-width modulated control commands from a controller

to controlling a set of valves and at least one pump to control the operation of the set of valves and the at least one pump with a microcontroller, the control command being optionally pulse-width modulated.
2. (Currently amended) The method of claim 1 further comprising monitoring the vehicle dynamics of a vehicle, the engagement of the clutch pack being based on the dynamics of the vehicle dynamics.
3. (Currently amended) The method of claim 1 further comprising monitoring or estimating the pressure of the fluid in the actuator, the a control algorithm implemented in the microcontroller being based on the monitored or estimated pressure.
4. (Original) The method of claim 1 further comprising monitoring or estimating the fluid temperature.

Appln. No. 10/758,324

Attorney Docket No. 10541-1828

5. (Original) The method of claim 4 further comprising adjusting the pressure so that the fluid temperature does not exceed an upper threshold.
6. (Currently amended) The method of claim 1 further comprising monitoring or estimating the a motor temperature.
7. (Currently amended) The method of claim 6 further comprising adjusting the a motor command so that the motor temperature does not exceed an upper threshold.
8. (Currently amended) The method of claim 1 further comprising monitoring the overall performance of the clutch pack.
9. (Currently amended) The method of claim 8 further comprising adjusting the a control algorithm implemented in the microcontroller to optimize the overall performance of the clutch pack.
10. (Currently amended) The method of claim 9 further comprising diagnosing monitoring the wear of the clutch pack.
11. (Original) The method of claim 10 further comprising adjusting the control algorithm to compensate for wear of the clutch pack.
12. (Original) The method of claim 1 further comprising following a break-in strategy.

Appln. No. 10/758,324

Attorney Docket No. 10541-1828

13. (Original) The method of claim 12 wherein the break-in strategy cures the surfaces of the clutch pack.
14. (Original) The method of claim 1 further comprising following a lubrication warm-up strategy.
15. (Original) The method of claim 14 wherein the lubrication warm-up strategy optimizes the cold performance of the clutch pack.
16. (Currently amended) The method of claim 1 further comprising providing known torque output based on a given pressure, temperature and speed difference across the ~~clutch and separator plates~~ disks of the clutch pack.
17. (Original) The method of claim 1 further comprising monitoring and controlling the pump motor and the valves for faster response and electrical energy saving.
18. (Cancelled)
19. (Original) The method of claim 1 further comprising monitoring temperature, clutch engagement time, applied pressure, and pump actuation to control the valves for temperature compensation.
